DocTap Health Pulse September 2026

Mental health featured in around one in six DocTap appointments in September

Published 02 October 2026 • Clinically approved by Dr Gugulethu Ndlovu

Approved revision: 02 October 2026 08:13 UTC

In September 2026, mental health and wellbeing concerns featured in 16.3% of DocTap appointments, compared with 14.5% in September 2025. This category includes stress and sleep concerns.

Based on 1,777 included GP appointments in September 2026. Appointments, not unique people or confirmed diagnoses; categories overlap.

Key findings

Mental health reviews outnumbered new concerns

In September, 135 of the 248 DocTap appointments where mental health and wellbeing was a main concern were follow-up reviews; 113 addressed a new concern.

Colds came up in a higher share than last September

+1.6 pp

Colds and upper respiratory infections featured in 6.0% of DocTap appointments in September 2026, compared with 4.4% in September 2025.

Urinary tract infections featured less often

-2.0 pp

Urinary tract infection concerns, including suspected infections, featured in 3.5% of DocTap appointments in September 2026, compared with 5.5% in September 2025.

About the data

These figures describe completed DocTap clinic and remote GP appointments addressing new concerns or follow-up reviews. They describe recorded appointment activity, not illness across the UK or confirmed disease incidence. Repeat visits can represent the same person.

Routine repeat-medication, results-discussion, paperwork and preventive-only records are excluded. Appointments are grouped by their date in the UK calendar month. Deleted records and results-review appointment records are excluded. New-concern and follow-up records need an included primary concern category; relevant secondary categories from those records are included too. Missing or unusable classifications are excluded. Other is an included category for concerns outside the remaining categories, not a label for missing classifications.

Concerns are classified with AI assistance. An appointment can address several topics; each appointment counts once within a group. Child topics overlap, so their counts do not necessarily sum to their parent. GP approval reviews the publication and is not an independent audit of every classification.

Shares divide the concern's appointment count by all qualifying appointments in the stated period. Seasonal and annual shares pool counts and denominators, rather than averaging monthly percentages. Missing months or a zero denominator make a comparison unavailable. Differences are descriptive and do not establish causes or statistical significance.

Season: September 2026; comparison: September 2025. Calendar coverage: September 2026 (1 of 3 calendar months).

Current season: 1,777 analysed appointments. Previous year's matching period: 1,560 analysed appointments.

12-month period: October 2025–September 2026. Saved monthly history: June 2025–September 2026.

Methodology: health-pulse-2. Classification version: 2. Each edition retains its saved figures and definitions; changes to published figures require renewed approval and a correction note.
